

AUTOSAR Conformance Testing: an overview

Valentina Lomi
Milano, 17/02/2011

- Definition
- Applicability and availability
- Conformance Test System
- Conformance Test Process
- Conformance Test Agencies
- Actors involved in AUTOSAR Conformance Testing
- Available paths for the Conformance Test Process
- Conformance Test Agencies Accreditation
- Intecs and Autosar Conformance Testing

DEFINITION

- **Definition:** verify that the test object (a software module) adheres to the relevant AUTOSAR specifications (i.e. it is “conformant”).
- **Nature:** Black box functional tests, focus on behaviour, interfaces and configuration of software modules
- **Object:** the Product Under Test (PUT) is a software item developed by a Product Supplier (PS)
- **Purpose:**
 - interoperability and re-use
 - obtain right to use AUTOSAR trademark

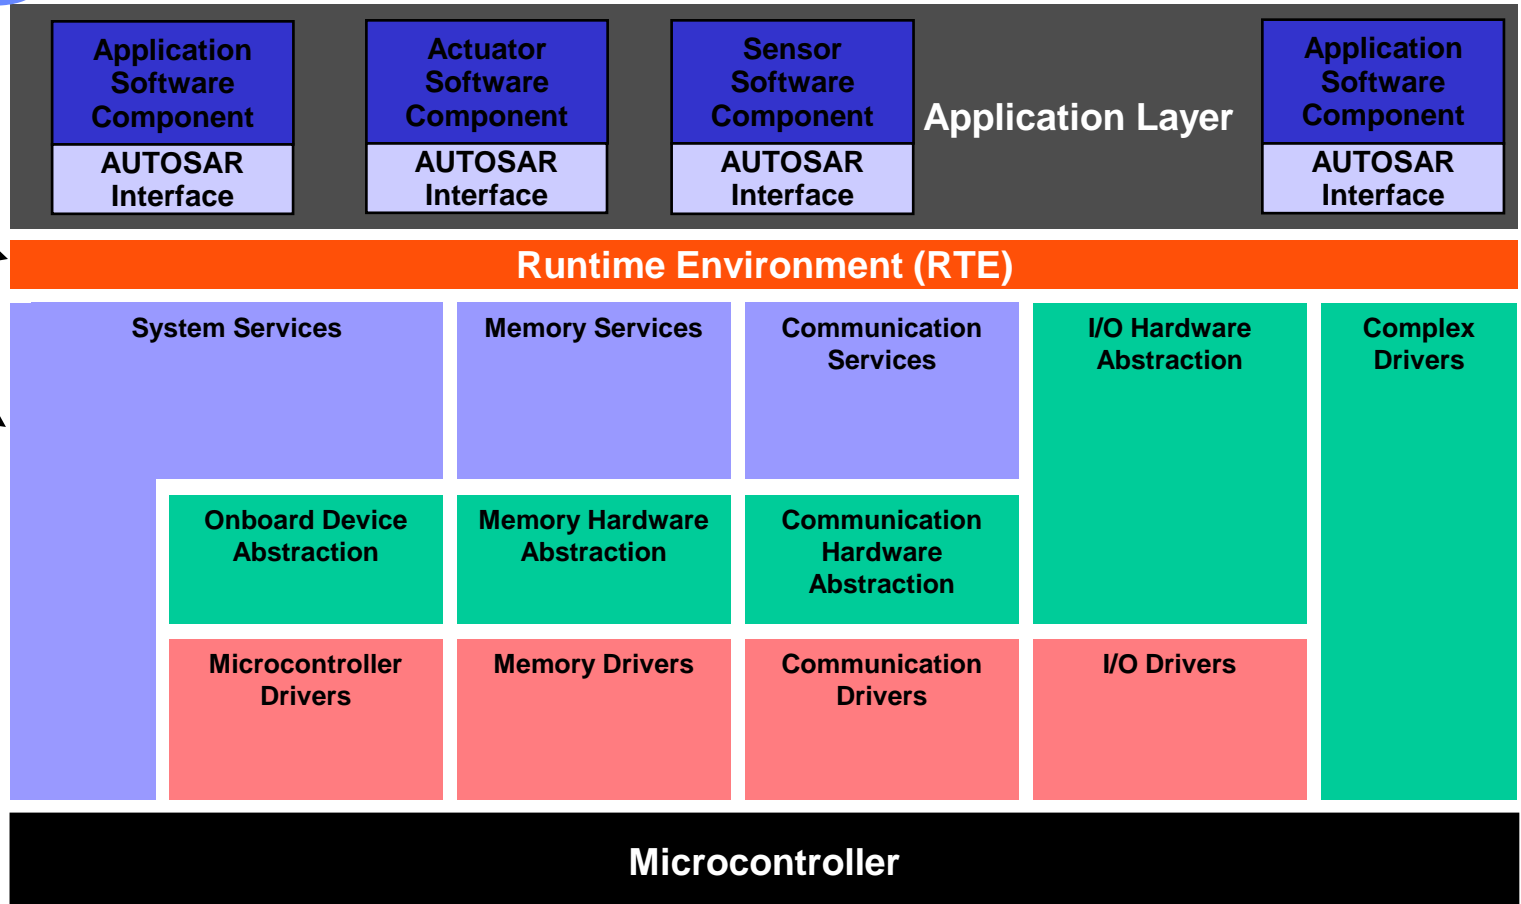

APPLICABILITY AND AVAILABILITY

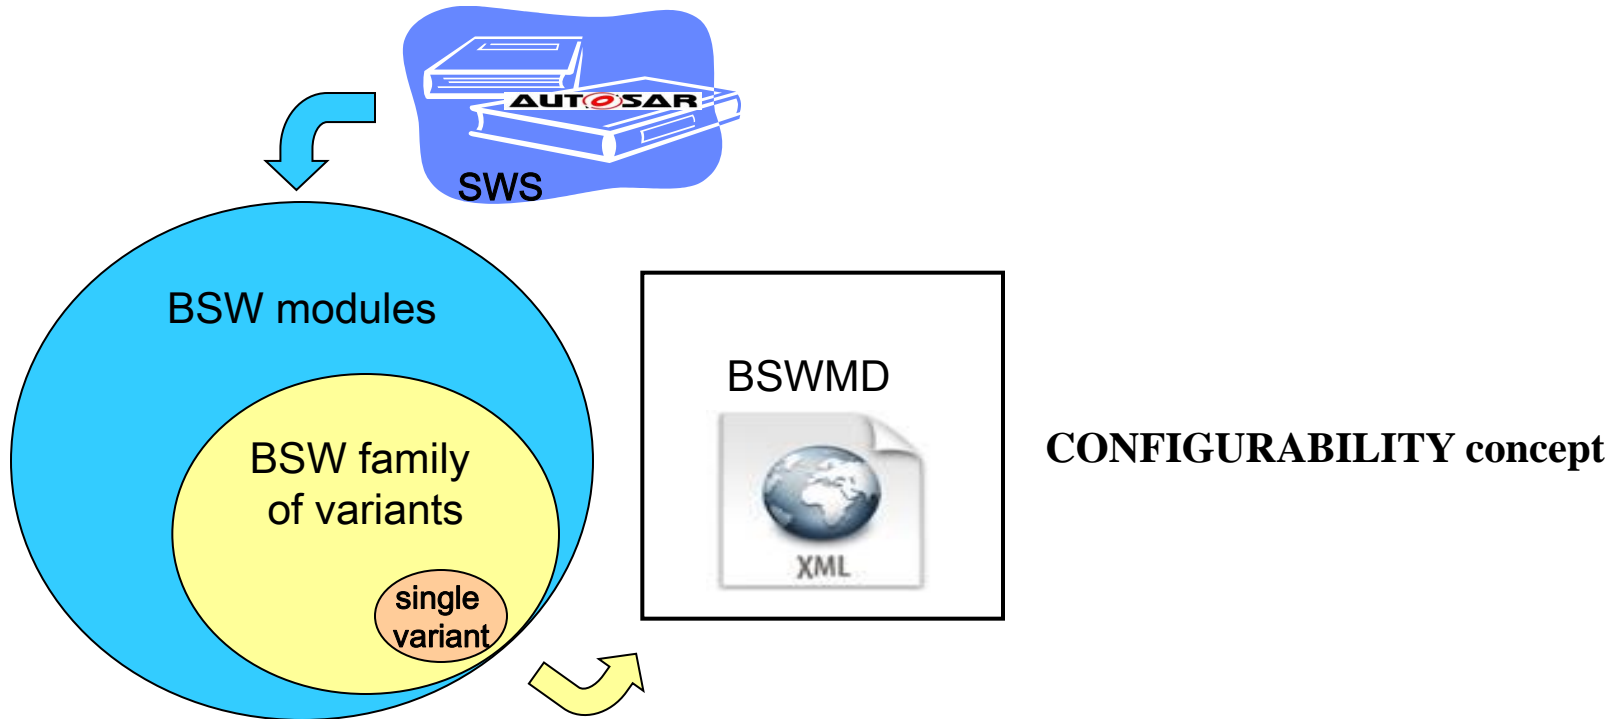

- **Applicability:** the PUT can fall under one of the categories:
 - Basic Software Modules (BSW)
 - Runtime Environment (RTE)

- **Availability:**
 - Conformance test specifications for BSW and the RTE will be released as part of Release 4.0. These conformance test specifications will become part of the AUTOSAR standard and are currently scheduled for March 2011.
 - Available for exploitation to all AUTOSAR licensees.

AUTOSAR BSW Specifications

What is to be tested

- BSW module: what is specified by Autosar through a SWS document specific for each module
- BSW variant: a single (testable) instantiation of a module.
- BSW family of variants: in general what PS wants tested

CONFORMANCE TEST SYSTEM

- Conformance Test Specifications (CTSspecs);
- Conformance Test Suite (CTS);
- Conformance Test Process;
- Accredited Conformance Test Agencies (CTAs)

Conformance
Test System

CTSpecs contain:

Dynamic test cases: to show the correct functionality of BSW modules in terms of their public input/output behaviour. They intend to check also whether the module correctly uses collaborating modules.

Static test cases: to check the configurability of modules (presence, multiplicity and value range) and check for the presence and content of interface files (header files)

- Includes:
 - one or several test tools
 - the necessary service to install, configure and run the tests
 - the identification of the test environment:
 - Build environment
 - Test board/ PC emulation
 - Required software configuration
- Must allow performing a collection of test cases on the PUT obtaining a list of reproducible results.

An example of a CT Suite

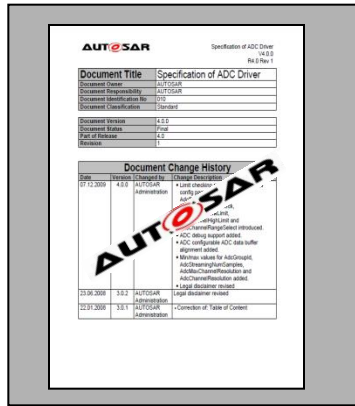

CONFORMANCE TEST PROCESS

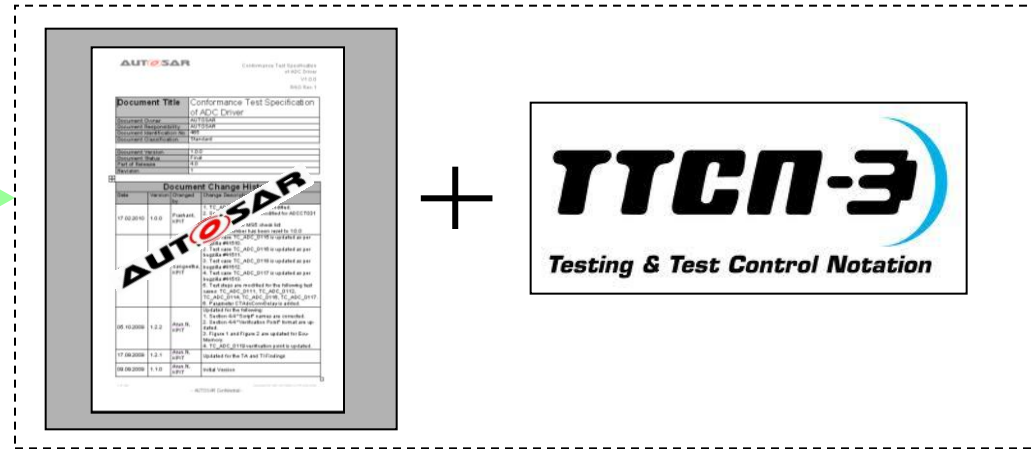

Conformance Test Process : from SWS to Test Report

AUTOSAR SWS document

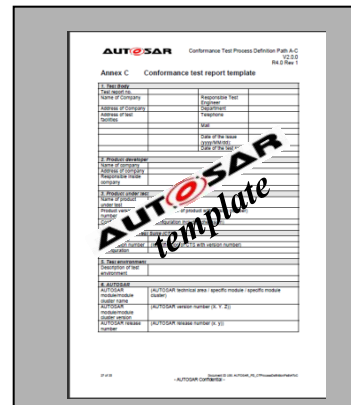

Conformance Test Specification

CTS execution

Test report

- CTSpecs are obtained from AUTOSAR specifications
- CTSpecs are implemented into CTS
- CTS are used execute the specified test
- Test Reports are issued on the test results

Conformance Test Process : from Test Report to AUTOSAR label

Test Report

AUTOSAR Conformance Test Process Definition Path A-C V2.0.0 R4.0 Rev 1

Annex C Conformance test report template

1. Test Body

Test report no.	Responsible Test Engineer
Name of company	Department
Address of company	Telephone
Address of test facilities	Mail
	Date of the test (YYYY-MM-DD)

2. Product developer

Name of company	(Name of company)
Address of company	(Address of company)
Responsible inside company	Department

3. Product

Name of product	(Name of product)
Version number	(Version number)
Configuration	(Configuration)

4. Conformance Test Suite (CTS)

Name of CTS	(Name of CTS)
CTS version number	(Identification of CTS with version number)
Configuration	(Configuration)

5. Test environment

Description of test environment	(Description of test environment)
---------------------------------	-----------------------------------

6. AUTOSAR

AUTOSAR module/module cluster name	(AUTOSAR technical area / specific module / specific module cluster)
AUTOSAR module/module cluster version	(AUTOSAR version number (X, Y, Z))
AUTOSAR release number	(AUTOSAR release number (x, y))

Intecs Document ID: AUTOSAR_TC_CTFConformanceDefinitionPathA-C - AUTOSAR Confidential -

Conformance Attestation

AUTOSAR Conformance Test Process Definition Path A-C V2.0.0 R4.0 Rev 1

Annex D Conformance attestation template

Attestation Body (Third party CTA)

Name of company (issuer of attestation)	(Name of company)	Responsible Engineer	(Name of responsible individual (name, company, department))
Address of company (issuer of attestation)	(Address of company)	Department	(Name of department)
			Date of attestation (YYYY-MM-DD)

Product Developer

Name of company (developer of product)	(Name of company)
Address of company (developer of product)	(Address of company)
Responsible under test (product name)	(Name of product under test)
Product version number	(Version number)
Date	(Date)

ATTESTATION

AUTOSAR module/module cluster name	(AUTOSAR technical area / specific module / specific module cluster)
AUTOSAR module/module cluster version	(AUTOSAR version number (X, Y, Z))
AUTOSAR release number	(AUTOSAR release number (x, y))

The product described above conforms to the AUTOSAR Release x.y specifications.

Responsible's signature

Intecs Document ID: AUTOSAR_TC_CTFConformanceDefinitionPathA-C - AUTOSAR Confidential -

AUTOSAR Label

Products which have successfully gone through this process are allowed to be marketed as AUTOSAR Release x.y

- The Conformance attestation is considered valid, independent of
 - Defects in CT specifications (documented in errata sheet)
 - Adaptations of the product for further hardware platforms
 - Changes in used tooling, e.g. compiler, linker, etc.
 - Minor updates of product

- Each attestation of a product is valid worldwide and permanent

CONFORMANCE TEST AGENCIES (CTA)

- Role of CTAs in the Conformance Test Process is to execute (or witness the test execution) conformance test, to approve test results and to deliver/reject Conformance Attestations.
- CTAs can be independent bodies or delivering a third party attestation or can be product suppliers accredited as CTA delivering self attestation for their products.

1. AUTOSAR objectives	Scope of AUTOSAR standardization
2. Main requirements	
3. detailed requirements	
4. detailed specifications	
5. Conformance test specifications ¹⁾	
6. Test implementations (CTS)	Scope of CTA tasks or responsibility
7. Conformance Test execution	
8. Test report / conformance attestation	

¹⁾ Including the conformance test methodology

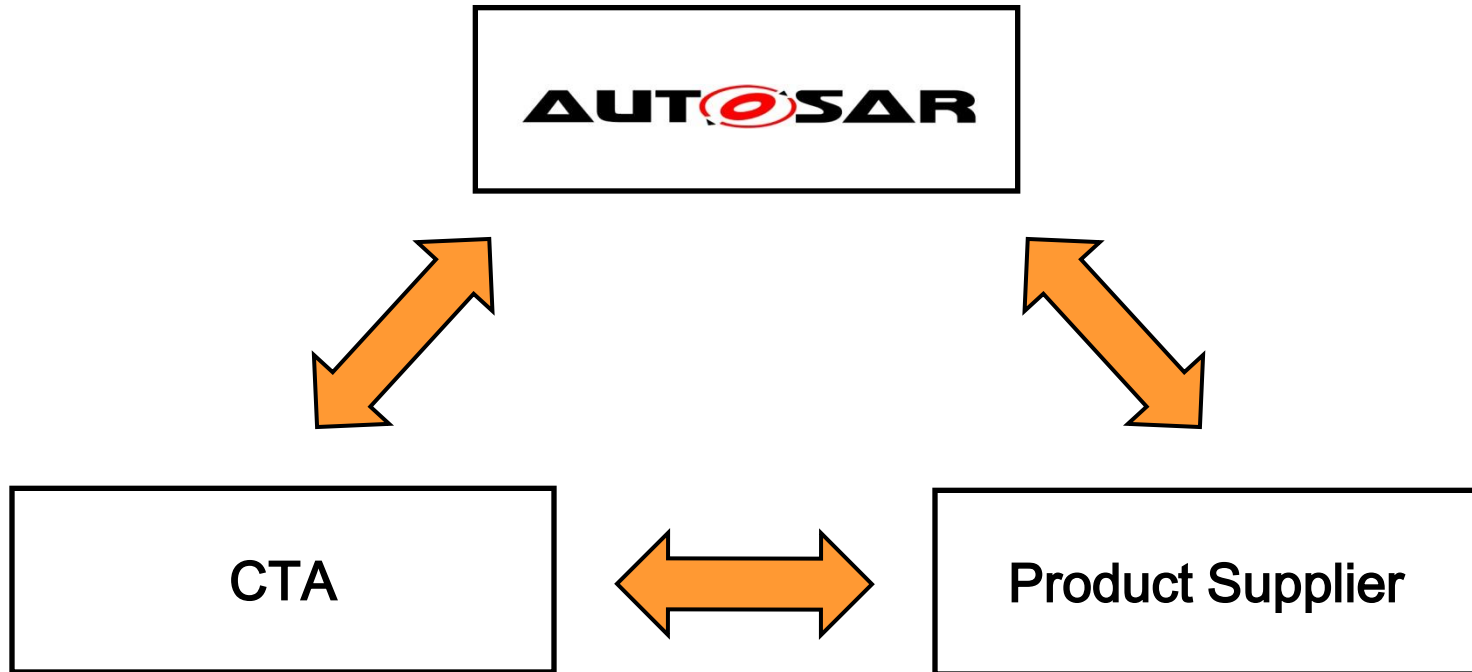

➤ CTA responsibilities:

- CTS setup: must faithfully implement the CTSspecs of a PUT such that tests can be executed in a reliable, reproducible manner
- CTS definition: attributes of the test environment must be identified
- CTS maintenance: new standard releases, bugs in the CTS
- Conformance Test Execution
- Test Report
- Conformance Attestation

ACTORS INVOLVED IN AUTOSAR CONFORMANCE TESTING

Actors involved in AUTOSAR Conformance Testing

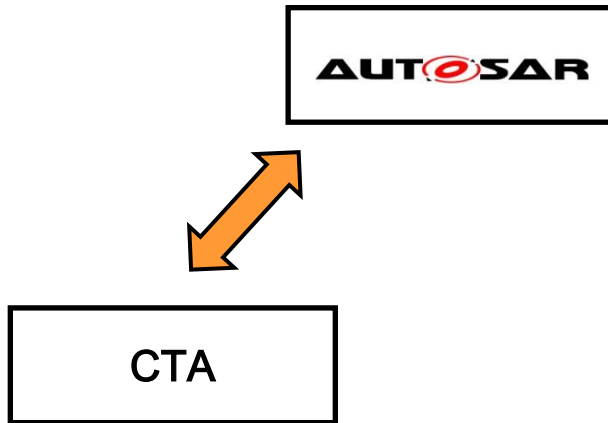

AUTOSAR:

- DEFINITION AND MAINTENANCE OF CTSPECS: defines, maintains and makes available conformance test specifications to CTA; informs CTA about changes in the standard (upcoming releases or errata sheet)
- DEFINITION OF TEST REPORT TEMPLATE

CTA:

- RECEPTION OF CTSPECS: gets conformance test specifications and updates from AUTOSAR
- CONFORMANCE ATTESTATION/REJECT REPORTS: on a quarterly basis report to AUTOSAR, (number of test reports for each module, number of test results rejected, number of attestations i.e. results accepted), data shall be anonymous
- FEEDBACK: raises RFC in case of inconclusive tests or bugs in the conformance test specifications in order to improve the standard continuously

- **AUTOSAR:**
 - **PRODUCT SPECIFICATIONS:** defines and makes product specifications available to the PS
 - **PRODUCT REPORT TEMPLATE:** information about the PUT

Product Report template

1. Product developer	
Product report no.	
Name of Company	Responsible Product Manager
Address of Company	Department
	Telephone
	Mail
	Date of the report (yyyy/MM)
2. Product under test	
Name of product under test	(Name of product)
Product version number	(Identification number)
Configuration	(Configuration checksum)
3. AUTOSAR	
AUTOSAR module/module cluster name	(AUTOSAR technical area / specific module / specific module cluster)
AUTOSAR module/module cluster version	(AUTOSAR version number (X. Y. Z))
AUTOSAR release number	(AUTOSAR release number (x. y))
4. Observations and comments (product variants and etc.)	
Responsible's signature	

Product Supplier

- **CTA:**
 - **CTS SETUP AND MAINTENANCE:** checks the applicability of the CTS for conformance testing, assures the reproducibility of the CTS results, identifies the attributes of the test environment; maintains CTS up-to-date.
 - **CT EXECUTION:** under its own quality control or eyewitness onsite
 - **SUPPORT:** provides assistance to PS with process, gathers questions from PS and reports to AUTOSAR if required (single interface to the customer)
 - **ATTESTATION OF CONFORMANCE:** attestate or reject conformance according to the test results, within 2 weeks after receiving the product and its documentation
- **PS:**
 - **PRODUCT DELIVERY:** send the product to the CTA
 - **PRODUCT REPORT REDACTION:** fill the report and send it to the CTA

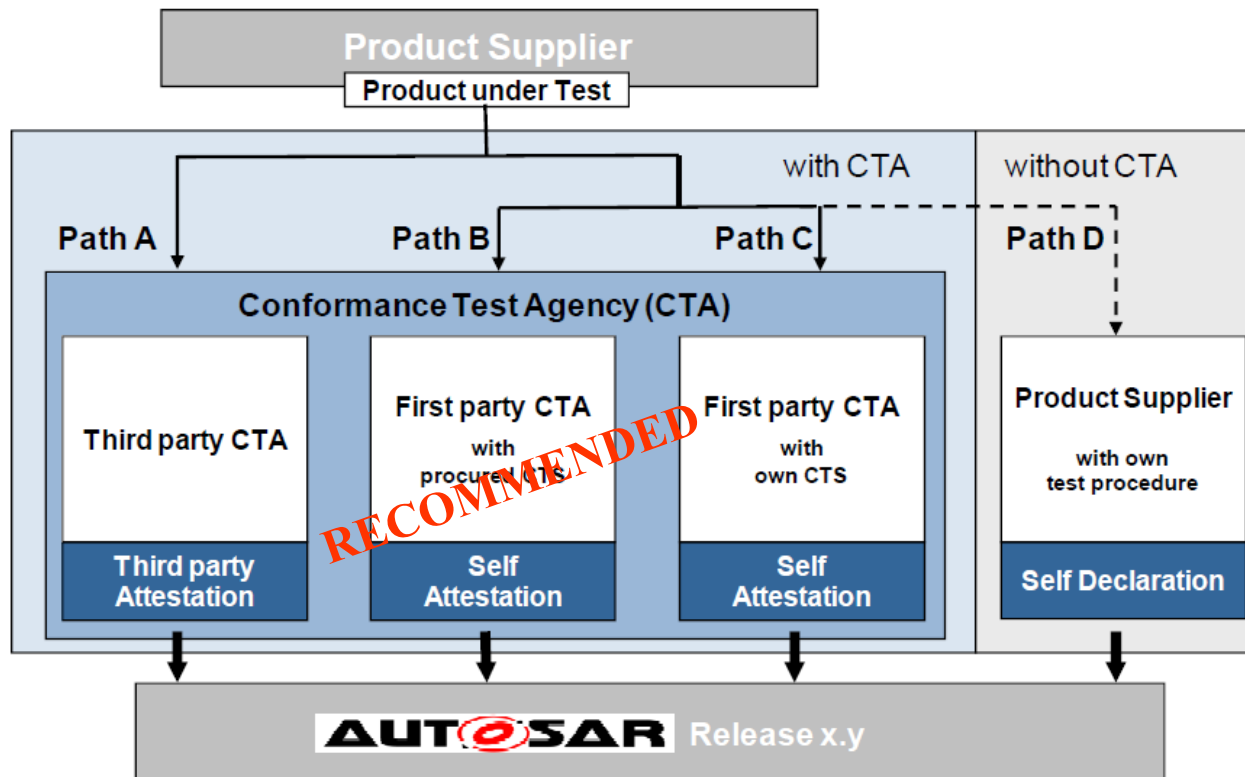

AVAILABLE PATHS FOR THE CONFORMANCE TEST PROCESS

Available paths for the conformance test process

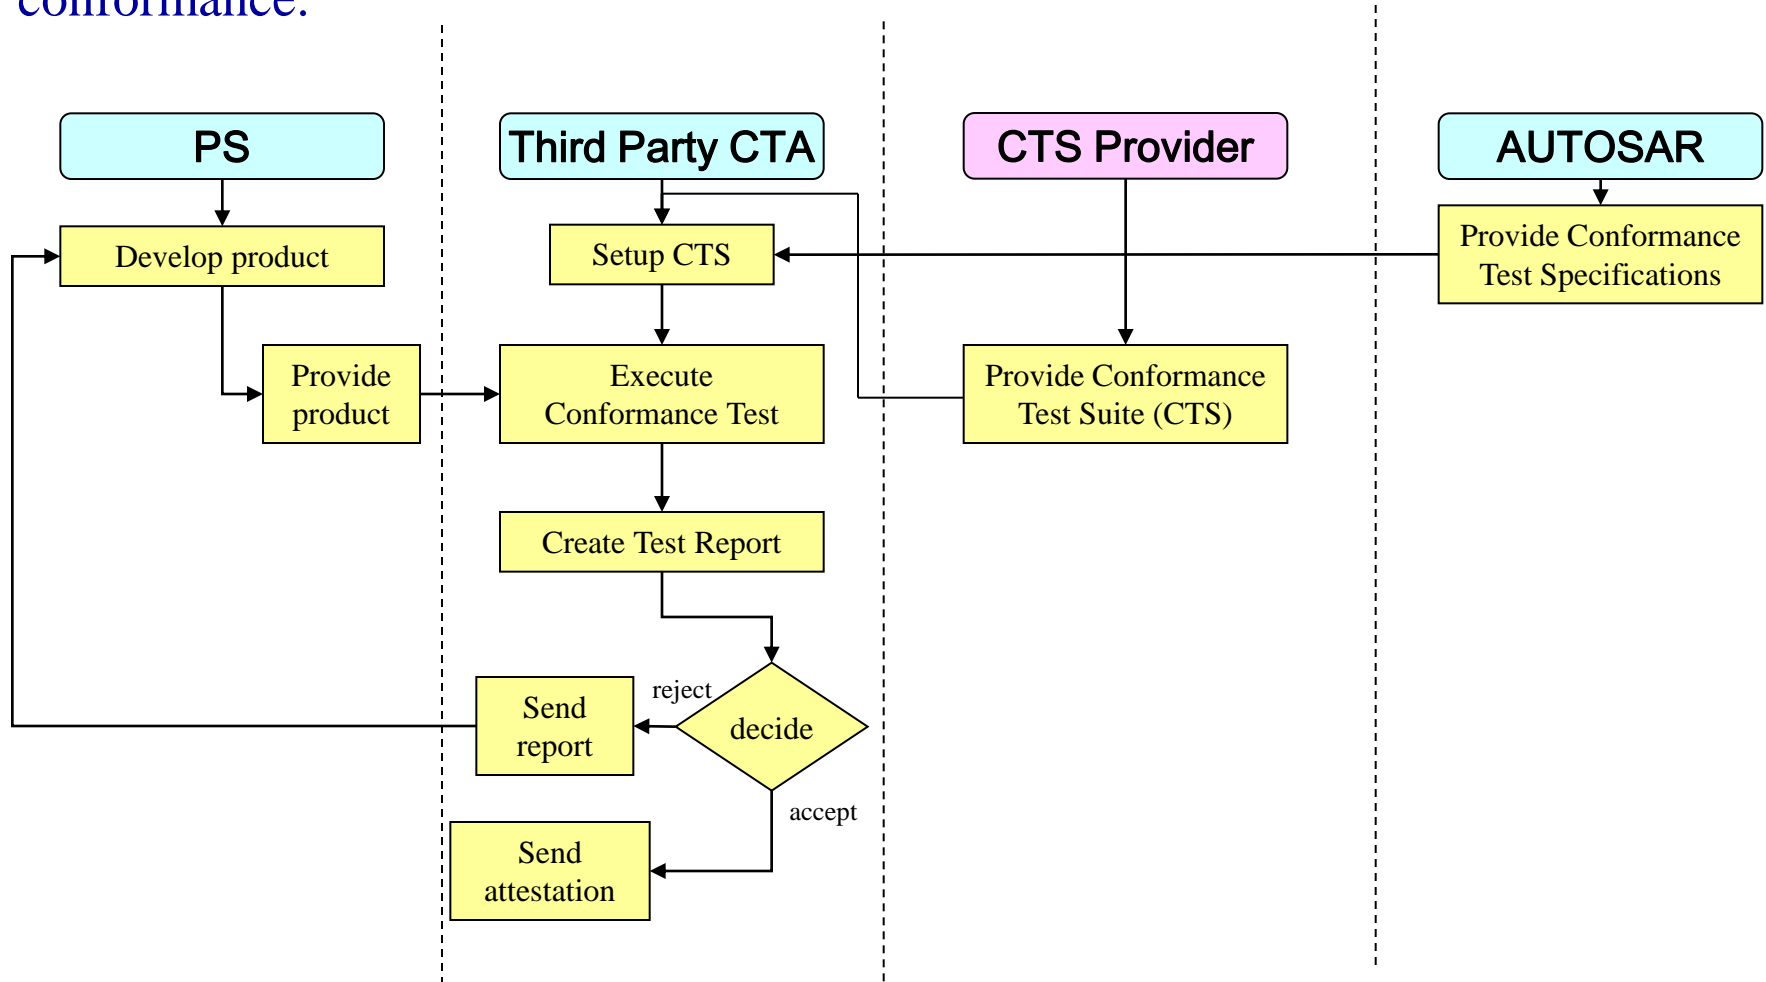

Conformance test process can follow one of paths A to D

CT Process: path A

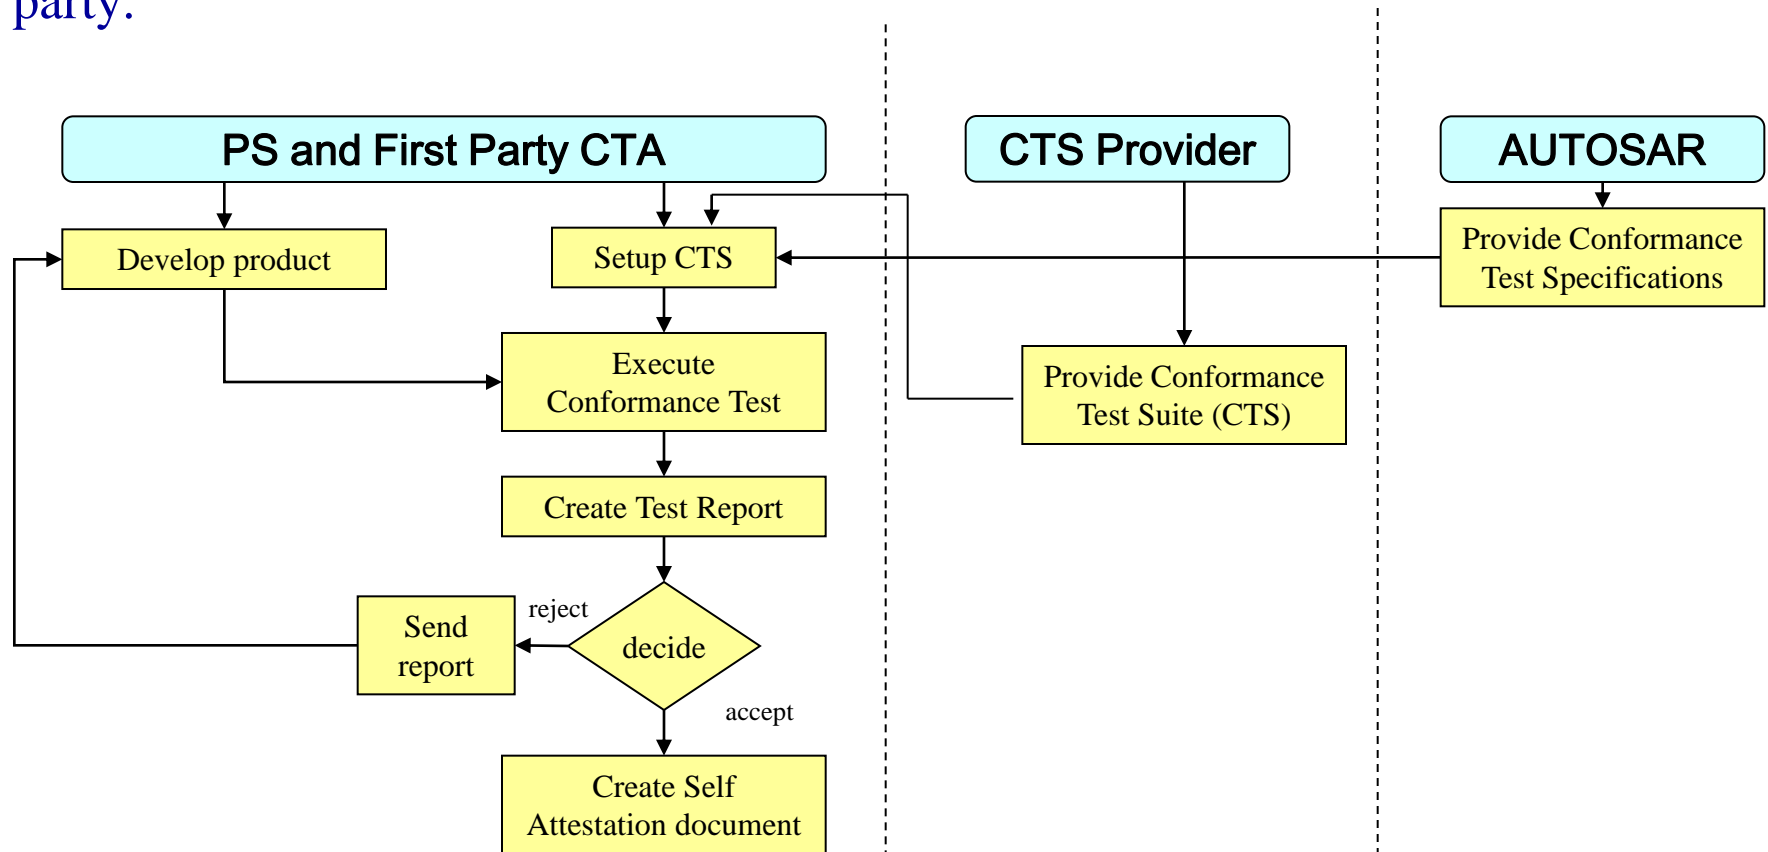

In this case CTAs are independent bodies delivering a third party attestation of conformance.

CT Process: path B

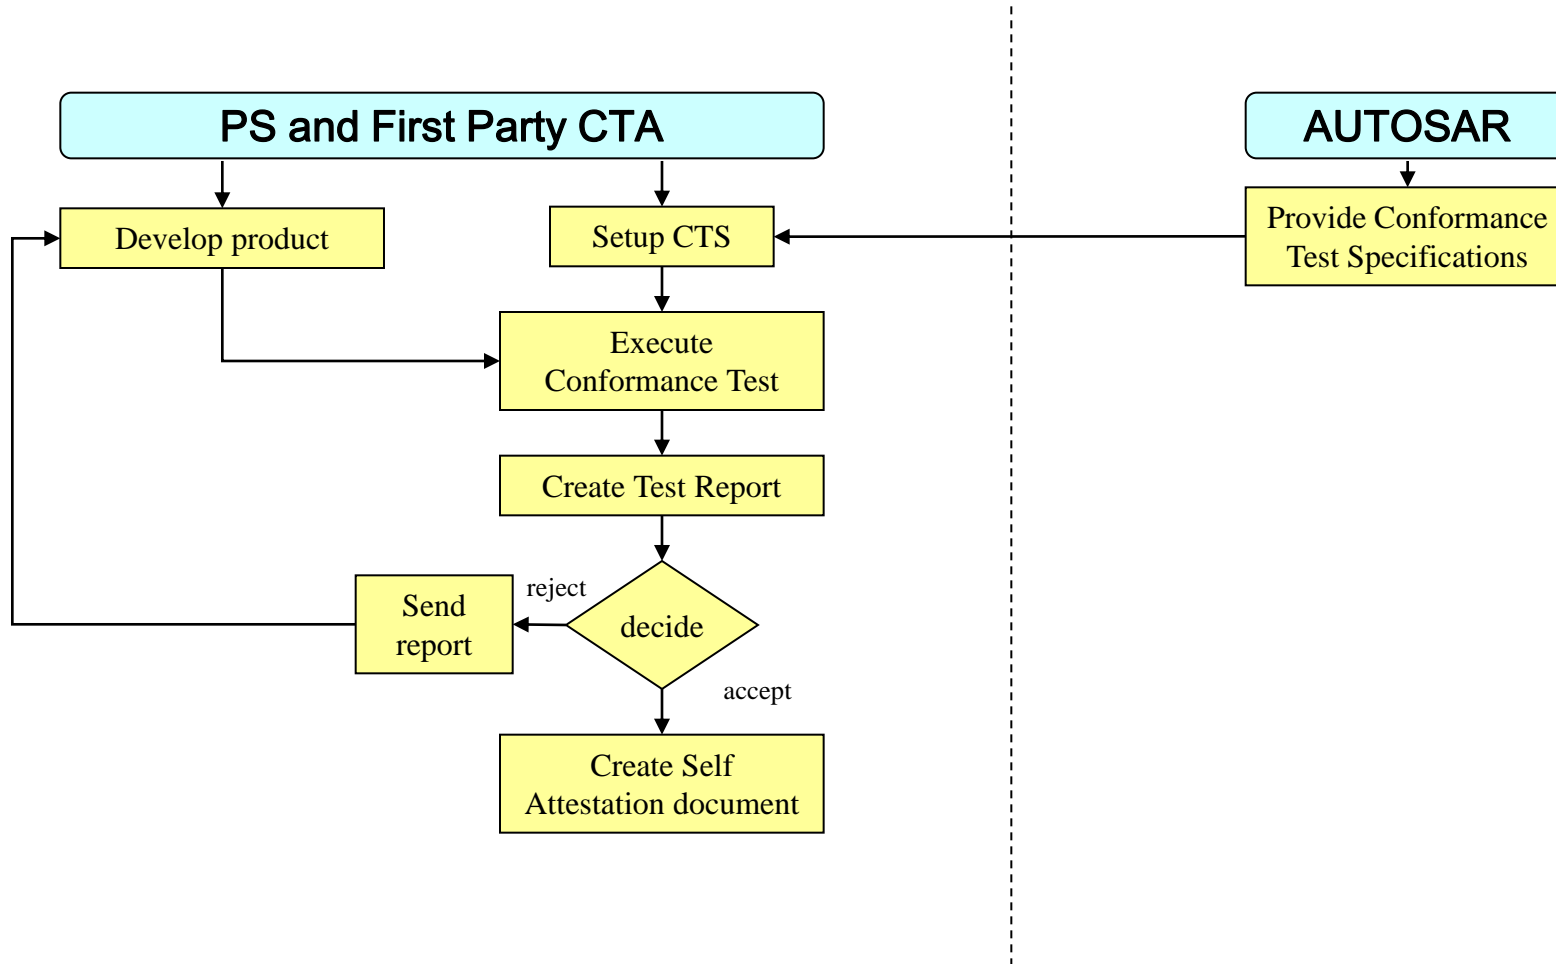

In this case CTAs are product suppliers accredited as CTAs and delivering self attestation of conformance for their products, CTS is provided by an external party.

CT Process: path C

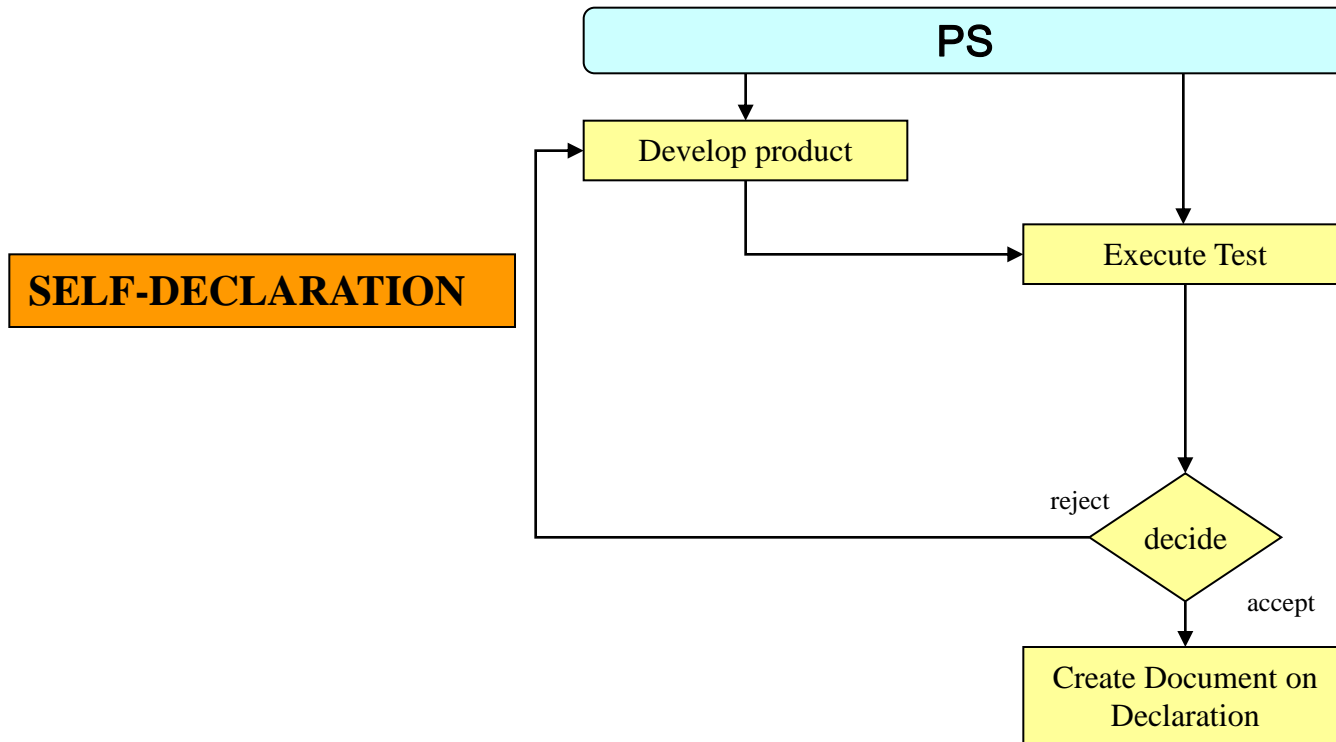

Same case as path B, but CTS is directly developed by the first party CTA.

A conformance test system for a specific AUTOSAR Release is not available (conformance test specs or CT process or CTA are not available).

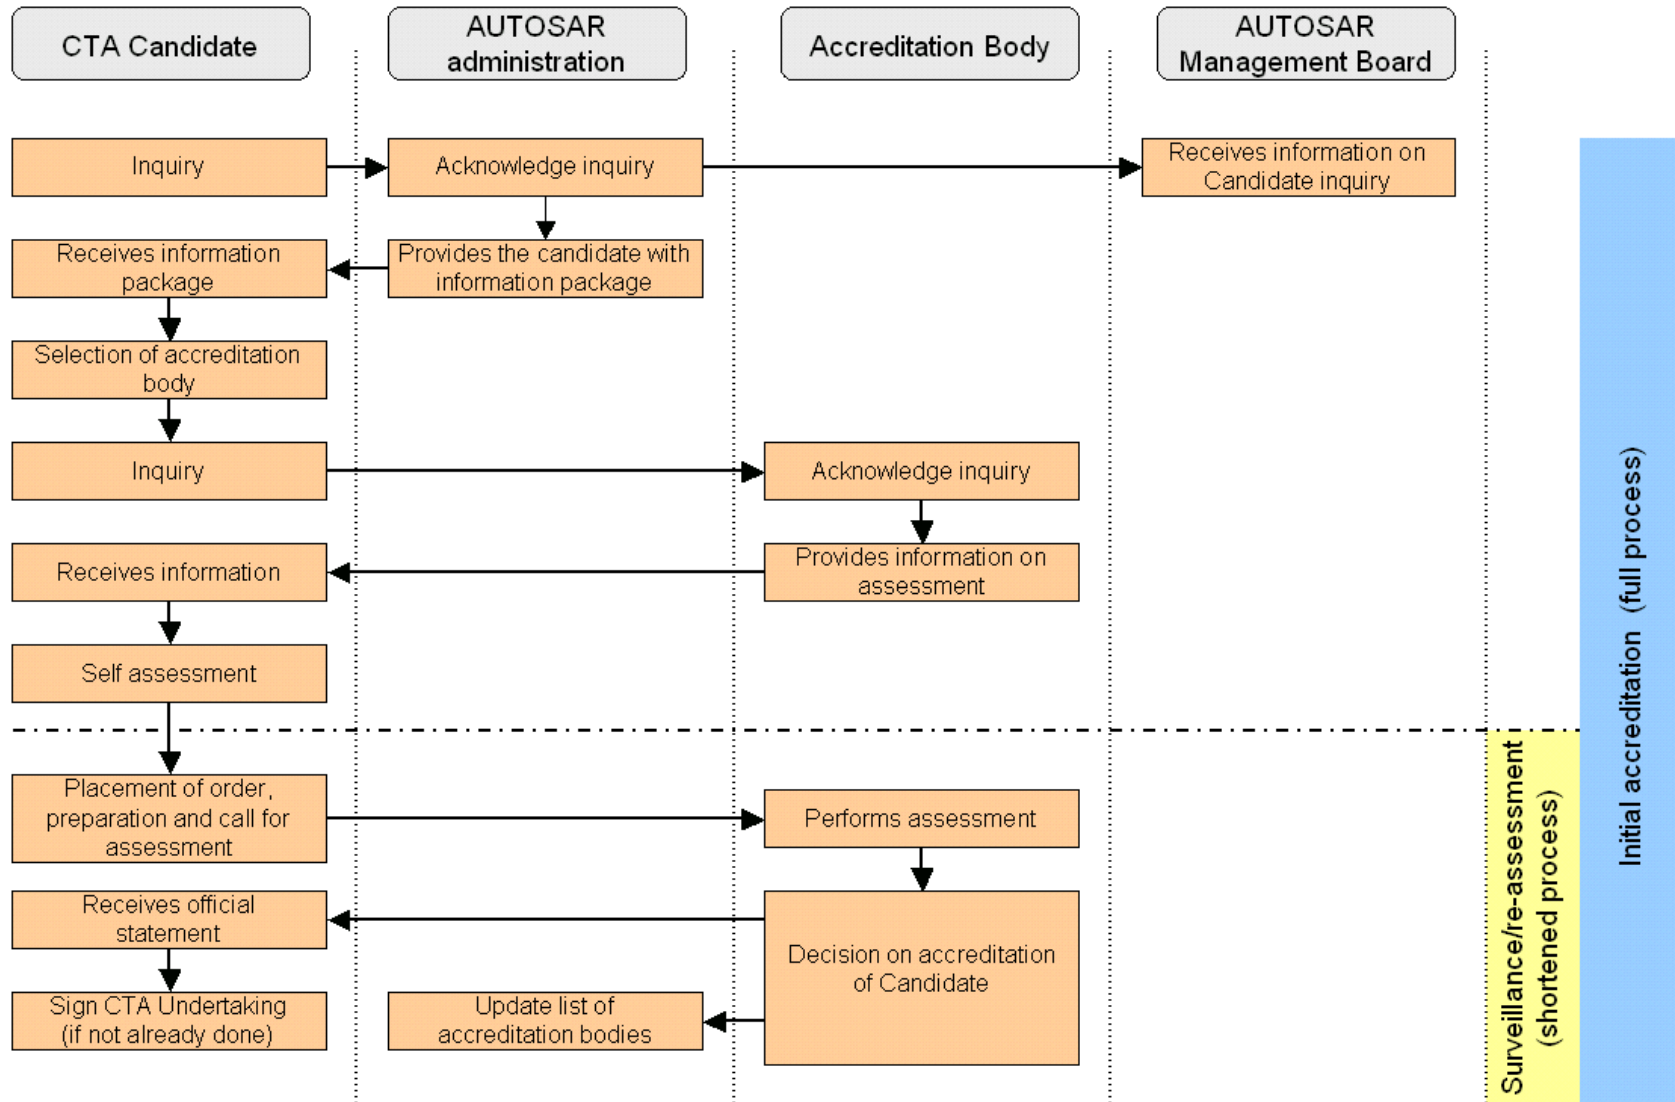

CTA ACCREDITATION

- Is the process by which first or third party CTA are assessed
- There are no limitations to the number of CTAs that may achieve accreditation
- AUTOSAR seeks to secure the capability of an accredited party

recommendations for the certification agencies

Only third party CTAs accreditation

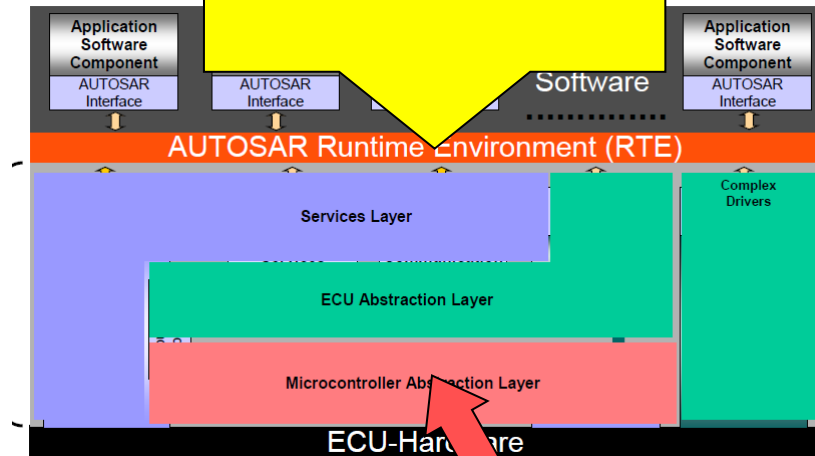

INTECS AND AUTOSAR CONFORMANCE TESTING

TOMORROW

- ✓ INTECS is going to extend the conformance test platform to all MCAL modules and to upper layer BSW modules.
- ✓ INTECS plans to add CAN and LIN as a support to communicate with the target where BSW modules are to be tested.

**INTECS is developing
a CTS for AUTOSAR
Conformance Testing**

NOW

- ✓ testing MCAL ADC module
- ✓ testing through RS232 and Ethernet

An example of an ADC test output

The screenshot shows the IBM Rational Systems Tester interface. The main window displays a test log for 'ADC'. A red arrow points from the test log to a summary table. The summary table is as follows:

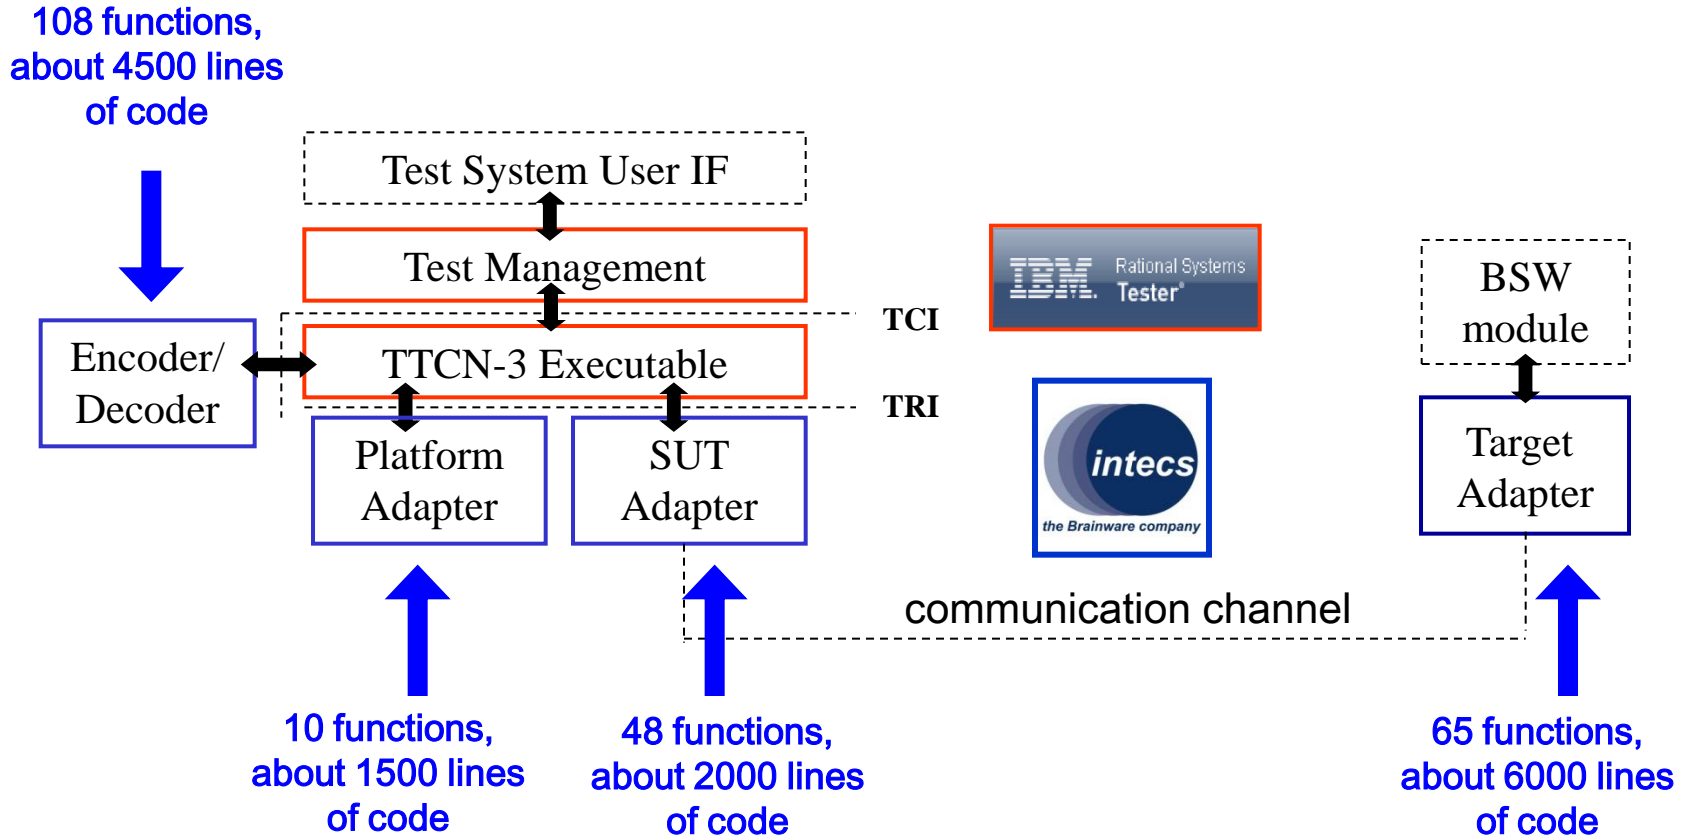

Test Case Summary	Count	Percentage
none	0	0%
pass	1	100%
inconc	0	0%
fail	0	0%
error	0	0%
total	1	

The test log also shows the following output:

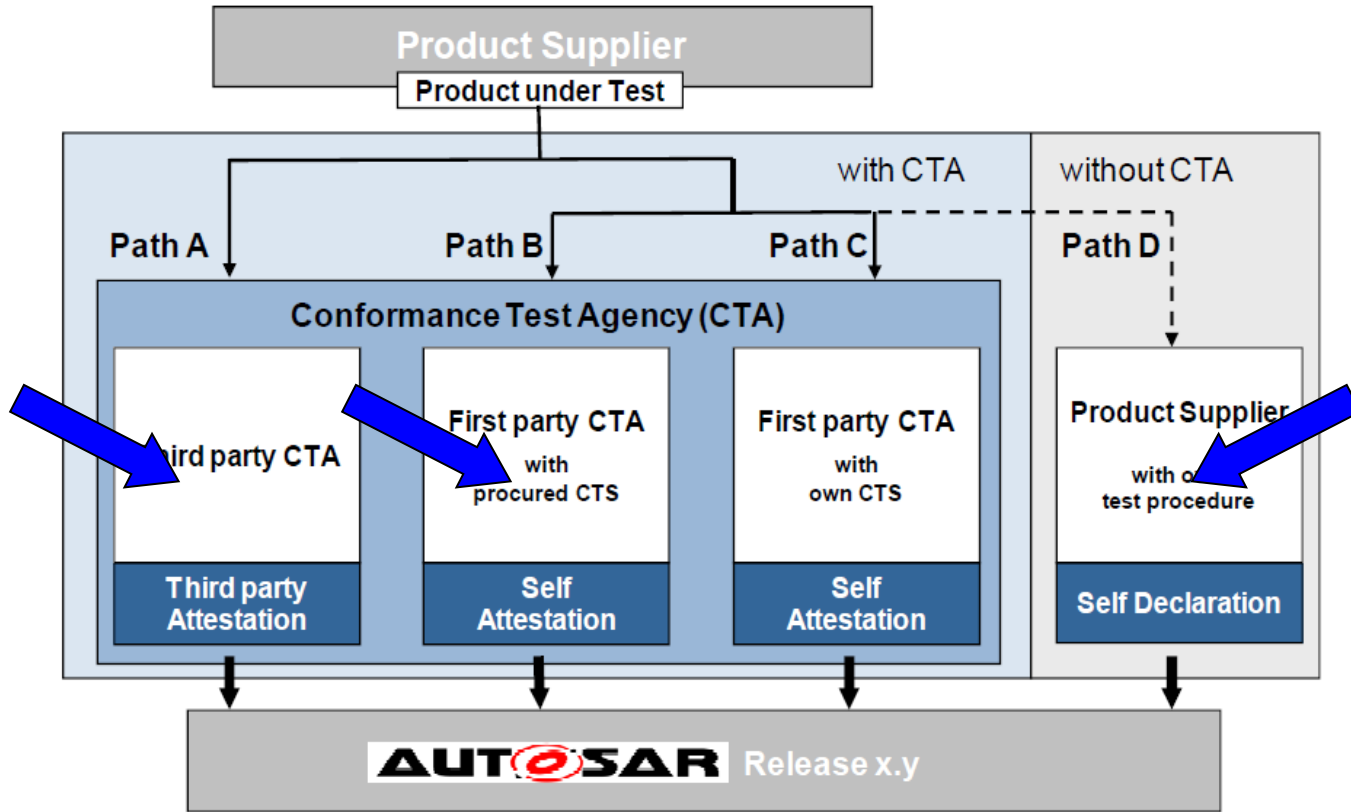

```

Test_strategy.ttcn (93): [MTC] local_verdict_changed: setverdict(pass)
Test_strategy.ttcn (99): [MTC] scope_left:
f_TestSetVerdict(
  in p_Verdict := pass
) return <undefined>
Validation_module.ttcn (133): [MTC] scope_left:
f_ValidateIntegerParam(
  in p_VP := "VPO2",
  in p_Operation := "Adc_GetVersionInfo",
  in p_Param := "su_patch_version",
  in p_ExpParam := 25,
  in p_ActParam := 25
) return <undefined>
Adc_api_functions.ttcn (420): [MTC] scope_left:
f_ApiAdcGetVersionInfo(
  in p_VP := "VPO2"
) return <undefined>
